Title:
Case Execution Performance Tool

Purpose of e-FMS Tool:

To integrate supply and financial information and develop a set of rules to manage cases.

Description of User Services Provided:

Case Execution Performance Tool (CEPT) is a tool used to display supply, financial, and case closure information in a rules-based system that color codes cases by green, yellow or red depending on rules violations. It is intended to simplify case manager's ability to detect problems relating to cases. The system has a search screen with 11 criteria to narrow case selection as well as summary headers with general case information. There are 6 tabs within the main program. Summary information displays summary logistics and financial data; Financial displays 13 rules and amounts; Case Performance displays 8 rules and amounts, Case Closure displays 7 rules, Search with the ability to sort, and Reports. There are 18 reports with 6 search criteria and can be viewed either by the data or with charts. There is also the ability to download raw data based on search criteria. Remarks can be entered based on the tab being viewed. Help screens are available. The system is used by all Navy FMS activities and for management by Navy IPO.

Key e-FMS Tool Features:

Rules development and consolidation of significant data.

User Discounts Offered (If any):
